CORE SKILLS

- Penetration Testing
- Threat Analysis
- Vulnerability Assessment
- Digital Forensics
- Incident Response
- Firewalls
- Information Security

TOOLS & PLATFORMS

- IBM QRadar
- Elastic Stack
- Darktrace
- FortiGate
- Kali Linux
- Wireshark
- Wazuh
- IDA Pro
- OllyDbg
- GLPI

FRAMEWORKS & ML

- MITRE ATT&CK
- Cyber Kill Chain
- STIX
- CARVER
- Python
- scikit-learn
- Flask

EDUCATION

De Montfort University
BSc IT in Cybersecurity
2023 — Expected Jun 2026
H.H Shaikh Rashid Al Maktoum School
Higher Ed. Certificate, Computer Science
2022

LANGUAGES

English · Urdu / Hindi · Persian

Shamsudin Aminullah
Cybersecurity Professional & SOC Analyst

PROFESSIONAL SUMMARY

Ambitious and proactive cybersecurity professional with a strong academic foundation in network security, ethical hacking and digital forensics. Skilled in vulnerability assessment, penetration testing and threat analysis using industry-standard tools and frameworks. Currently working as a SOC Analyst while completing a BSc in Cybersecurity — known for problem-solving, attention to detail, and a commitment to learning technologies that strengthen organizational resilience.

EXPERIENCE

SOC Analyst

ITButler E-Services · Jan 2026 — Present

- Monitor security alerts and events using IBM QRadar, Elastic Stack (ELK) and Darktrace.
- Triage incidents — reviewing logs, analyzing alerts and escalating confirmed threats to senior analysts.
- Conduct threat-hunting to identify unusual network behavior and potential security risks.
- Monitor firewall activity on Fortinet FortiGate and review configuration changes.
- Document incidents and manage tickets in the GLPI system for accurate reporting and follow-up.

KEY PROJECTS

Phishing Email Detection Tool — Final Year Project (Jun 2026)

Calibrated ML web app classifying emails as phishing/legitimate with **98.77% held-out accuracy**. Engineered a 5,020-dimensional hybrid feature space (5,000 TF-IDF + 20 handcrafted indicators), trained a sigmoid-calibrated Logistic Regression model on 25,116 emails, with allowlist override and hard-signal escalation for BEC/brand-impersonation cases. *Python, scikit-learn, Flask, Gunicorn, Railway — live deployment.*

Machine Learning NIDS (May 2026)

Network Intrusion Detection System using a Random Forest classifier across DoS, Probe, R2L and U2R attack types; feature engineering surfaced key signatures (e.g. SYN-flood error correlations) and evaluated evasion.

Malware Analysis & Exploit Research (Jan 2026)

Static/dynamic analysis of malicious artifacts: deconstructed a PDF dropper with PDFID, reverse-engineered a Trojan Downloader in IDA Pro (single-byte XOR, key 0xFF, hiding C2), and demonstrated a stack-based buffer overflow in C using OllyDbg to hijack EIP.

Cyber-Physical Systems Security (Nov 2025)

Investigated a simulated water-treatment attack with Wireshark and Wazuh; analyzed IT→OT breach path, prioritized assets via the CARVER matrix and mapped to MITRE ATT&CK for an incident report.

Cryptography Project (Jun 2025)

Implemented a modified Affine cipher, performed RSA shared-modulus cryptanalysis (extended Euclidean attack), and analyzed Needham–Schroeder and Diffie–Hellman weaknesses with full mitigations.

Penetration Testing Project (Mar 2025)

Full-scope network pentest in Kali Linux: service discovery, exploitation and post-exploit validation, with a reproducible report including MITRE ATT&CK mappings and remediation.

SolarWinds 2020 Attack Analysis (Jan 2025)

Threat-modelled the breach with the Cyber Kill Chain and attack trees, ran Cisco Packet Tracer simulations, and produced STIX-based cyber-threat-intelligence models.

Cyber-Club “Search Engine” — Winner (Mar 2023)

Won a campus-wide cybersecurity scavenger-hunt competition at DMU, applying practical security skills under time pressure.
